A Framework for Business Intelligence Data Governance

ABSTRACT- -

Many organizations have attempted to establish Data Governance as a core organizational function with varying degrees of success. While the ideal end-state is enterprise Data Governance, a pathfinder to get there is via Business Intelligence.

BI Data Governance is focused on the processes and practices that define how data is managed within a BI environment. The BI Data Governance Framework introduces a structured approach to enable business alignment, accountability and collaboration. Once established the organizational infrastructure and rules of engagement established for BI Data Governance can be readily extended to an enterprise scope.

This session will include:

  ▪ BI Data Governance Guiding Principles across multiple dimensions of the framework.
  ▪ A structured approach to define how data is to be managed within a BI environment.
  ▪ A consistent approach in assigning accountability to maximize data integrity.
  ▪ A guide to "applying" the Framework, initially and on an on-going basis.

BIOGRAPHY- -

Cal Rosen
President
ActionInfo Consulting Services

Cal Rosen is a recognized leader in Information Management, Business Intelligence and CRM providing Management Consulting and Advisory Services for over 16 years in approximately 40 North American client engagements, including: CIBC, Scotiabank, HSBC, FleetBoston Bank, Sun Life Financial, Bell Canada, Bell South, Ameritech, Canadian Tire, Johnson & Johnson, INCO, NB Power, FirstEnergy, Canada Border Services Agency, Human Resources Development Canada, Workplace Safety & Insurance Board of Ontario, VIA Rail and CP Rail.
